

April 7-30, 2026

## OVERVIEW

The Strategy Management discipline has been built over several decades of emerging ideas that have been confirmed or rejected by the test of practice. Unfortunately, some of the failed ideas still float around, making it more difficult for us to understand with clarity how Strategy's processes should work.

The Explaining Strategy applicative course is aimed at connecting the dots of the key concepts, theories, and frameworks that are placed at the foundation of the Strategy, providing an integrative view that allows us to separate the signal from the noise in understanding how Strategy should best be built and managed.

We are looking at all available thought processes that we can use to design and implement the Strategy, identifying their inputs & outputs, and understanding what is strictly necessary for an integrated system, and what is redundant, or doesn't fit with the rest.

This course is not only about explaining Strategy. It is also about testing how its concepts work in practice. For this reason, the course sessions are a balanced mix of showing and doing, including an AI-powered process of designing Strategy's and Strategic Plan's models, enabled by [Rapid Strategy](#), a new app that guides participants through the 28 Practice Sessions steps.

Each cohort team member is assisted by AI to define a Case Study, based on a real company profile. Then, the AI-driven workflow goes step by step for building the Strategy models applicable to their case. The team discussions are encouraged and separate virtual meeting rooms are provided during the Practice Sessions.

Explaining Strategy was born from the practice of testing how the key concepts and theories of Strategy work for real people in real organizations.

### Schedule at a glance

 <b>Course Start Date</b>	April 7, 2026
 <b>Course Duration</b>	4 Weeks plus 3h Kick-off meeting 3h Wrap-up meeting
 <b>Course Sessions</b>	3 x 3h live sessions, every Tuesday
 <b>Practice Sessions</b>	3 x 3h live sessions, every Thursday

### Practice Sessions

This is a unique opportunity to test the concepts and methods presented in the course, by using the RapidStrategy app that is available as a practice environment for building the Strategy model and the Strategic Plan model, for each participant's own Case Study. The practice process is AI-driven, giving you an insight into Strategy and AI working together in an incremental multi-step process.

April 7-30, 2026

## What you'll learn:

### ☑ Understand Strategy's integrative role

Grasp the essentials of the interdependent relationships between the processes of Strategy Experimentation, Strategy Formulation, and Strategy Execution, and better understand how the outcome of the thinking process from each of them flows into the next, in a closed loop system.

### ☑ Get clarity on how Strategy is adaptive

Understand how the traceability of the chains of hypotheses that we employ when deciding on the components of our Strategy's models allows us to find out which of those hypotheses turned out to be invalid and how we adapt our models, as a consequence of that.

### ☑ Practice the design of Strategy models

This course is not only theory. We practice what we preach and so can you in the Practice Sessions, during which we will experience the effective team decision-making, enabled by an online platform that allows us to design our own Strategy and Strategic Plan models.

Due to interactivity reasons, there are limited seats available for each cohort. Ready to get clarity on how the full Strategy works? Learn more in the Enrollment page.

### 🧠 Key Concepts

- Strategy's main challenge is to provide the best-fit solutions for specific types of customer Jobs-to-Be-Done.
- Strategy is continuously adaptive because not all hypotheses upon which it is built can be valid.
- Strategy is managed in a continuous, overlapping cycle of formulation and execution that feed into each other.
- Strategy's choices aim to maintain an ambidextrous wave of parallel, transient competitive advantages.
- Strategy's choices are positioning the organization within the market-solutions space, and are selected from a reference cognitive model of choices types.
- Selecting Strategy's choices is enabled by experimentation and based on anticipated influences inferred from the analysis of trends and weak signals.
- Strategy's choices must be supported by a set of required activities and capabilities
- Strategy's execution must close the gaps between the existing and the desired positioning and between the existing and the required capabilities and activities.
- Strategy's execution is driven by the cause-effect related and aligned objectives achieved through the effects of initiatives with monitored outcomes.
